

POS Portal Risk Management

POS Portal's Risk Management Solution combines PCI-compliant transaction hosting services, a parameter-based fraud monitoring engine, and a cloud-based, merchant acquiring-specific CRM to give you everything you need to manage your portfolio. We maintain the connectors to processors, host the transactions, generate alerts, and provide you with flexible CRM tools for you to manage the workflow, research transactions, and provide visibility to fraud related information across functions.

Risk Analysis Workflow

With a cloud-based CRM (built on Salesforce.com's Force.com web application platform), you get all the bells and whistles of a modern web application and the ability to configure it to your business needs.

- Risk Alert Queues
- Performance Dashboards
- Merchant At-a-Glance
- Time-Based Workflows
- Automated Approvals
- Alert Parameters
- Alerts at Multiple Levels
- Integration with Underwriting
- Email Templates
- Approved vs. Actuals
- Alert Status/Outcome
- Activity Tracking
- Cross-Functional Visibility
- Transaction Research
- Tasks and Workflow
- Custom Reports

Transaction Hosting

POS Portal maintains connectors to processors for authorization, capture, and settlement data. We tokenize the data to provide you with secure research capabilities in our P2 CRM web application or via tokenization services in your own application. Our two data centers are PCI compliant and provide you with the security and redundancy needed for hosting your sensitive portfolio data.

- Secure Vault and Tokenized Card Data
- Transaction View of Auth, Capture, Settlement
- Search by Multiple Parameters

The screenshot shows a 'Transaction Search' interface with various filters and a results table. The filters include Card Number, Date Range (Start: 5/1/2010, End: 5/2/2010), Exact Amount, Amount Range (Low, High), Batch ID, Auth Code, and Card Type (VS). The results table shows 4 records found.

Authorization ID	Card Number	Date	Card Type	Amount	Declined	Voided	Transaction Type	Processing Code
